

INTRODUCING TRUFLO ORTHO Surgical Suction Technology

The Tru-Flo Surgical Filter was designed with high-performing orthopedic surgeons in mind. This state-of-the-art suction filter technology eliminates downtime in the operating room. A patented filter basket collects surgical debris, and the filter basket is quickly and easily emptied for uninterrupted surgical workflow.

30% More Suction*
0% Surgical Downtime
33% Annual Savings

*Based on actual OR performance

Why TruFlo Ortho Doesn't Suck

Eliminates OR down time due to clogged suction systems.

Large bore intake tube increases suction by 30%.

Maximum capacity filter allows uninterrupted surgical workflow.

Unique metal reinforced flex tip allows adjustment of suction tip angle.

Integrates into existing surgical workflow, no training required.

Works with all existing suction systems.

Debris Filter

When surgical workflow is interrupted by occluded suction, OR costs and surgical team stress levels rise while patient safety is on the line. **TruFlo Ortho** eliminates OR delays by providing uninterrupted suction and better ergonomics for a more efficient surgical procedure.

Why the cost of delays in the OR suck

- \$62 per minute:** That's the average OR cost per minute (each occlusion delay averages 6 minutes)
- \$20-\$60 per occurrence:** The cost to replace suction tips & tubing when occlusion can't be cleared
- \$20,000 per occurrence:** The potential cost for increased anesthesia complications
- \$20,000 - \$90,000 per occurrence:** This is the potential cost for increased surgery site infections
- Lower surgical efficiency** due to occlusion delays
- Increased potential for anesthesia complications** due to occlusion delays
- Increased stress and discord among surgical team** because of delays

33%
Annual Savings

What TruFlo Ortho does for you:

- **33% Annual savings** if doing 60 hip & knee arthroplasties per month
- **Improves OR safety and efficiency**
- **Provides better surgical workflow and team harmony**
